I am writing this letter to recommend **Chris Haskins** for positions at your company in the areas of Web Development, Database Design and Integration and custom third-party interfaces. Chris worked for our web services company for nearly eleven years, and throughout that time he was the most creative and capable web developer we've ever had. He was instrumental in developing and implementing overall web strategies and dealt with the details along with the bigger picture. He has extensive knowledge of SQL Databases, C# coding and coding standards, HTML, JavaScript and CSS expertise across multiple browsers and operating systems.

He implemented a wide range of unique solutions for the variety of clients we serve and was responsible for creating a modular publishing system we call the Digital Management Platform. It supports configuration of modules applicable to each client's needs, including a web page content module, events/event registration module, news module, products module, member module (for member portals), a learning module and many other custom modules specific to each client. Clients can login to update or add content, post new events, or edit existing events, news items, manage members etc. for their websites or portals, then preview changes before publishing any changes to their live sites. The technologies below were mastered and used to create our publishing platform and integrate our front-end client solutions:

- ASP.NET
- MVC
- C#/.NET
- SQL Server
- IIS
- Class Libraries (shared code for DMS modules)
- Windows Services
- Command line progams (scheduled tasks)

Server-Side Coding
- Autofac (dpendency injection)
- Entity Framework / Repository pattern (data access)
- HtmlAgilityPack (HTML parsing/manipulation)
- ASP.NET Membership/Role/Profile providers

Front End Coding
- HTML/CSS
- Sass (css preprocessor)

JavaScript
- RequireJS (file and module loader)
- JQuery (DOM manipulation)
- underscore.js (utility library)
- handlebars.js (template engine)

- CKEditor (in browser HTML editor)

Other
- Elmah (error reporting)
- MSTest (unit testing)
- Vimeo API integration
- REST API's
- PDF/Excel/Google Chart integrations for reporting

He was always thoughtful and considerate, an excellent team player who can also work independently and do a fantastic job. He is a creative problem solver and is brilliant without any ego or attitude. I highly recommend him!

If you have any additional questions feel free to email me at vickyc@channelready.com or call me at 425.503.0266.
